Junior Full-Stack Developer

RESUME SUMMARY

Software Engineering graduate from Near East University and an aspiring **Full-Stack Developer** focused on delivering end-to-end solutions using modern web technologies. I specialize in building high-performance, user-centric applications by leveraging the **.NET Core ecosystem** on the backend and **React** on the frontend.

In backend architecture, I embrace the **microservices approach**, with hands-on experience in modular service design, **Ocelot API Gateway** routing, and secure authentication processes via **IdentityServer4**. On the frontend, I build component-based structures with React, manage asynchronous API integrations, and develop interfaces that prioritize user experience.

I utilize **Entity Framework Core** and **Dapper** for data management, while implementing **Redis caching** solutions to optimize system performance. I containerize my projects using **Docker** for deployment and maintain a sustainable development discipline strictly adhering to **Clean Code** and organized **Folder Structure** principles. As an engineer who bridges technical proficiency with real-world scenarios, I am eager to learn, grow, and contribute to professional teams in a challenging role.

Technical Skills

Backend Development

- **.NET Core / .NET MVC / .NET Web API**
- **Entity Framework Core & Dapper**
- **Microservices & API Gateway**

Database

- **MSSQL**
- **SQL**
- **MongoDB**
- **Redis**
- **PostgreSql**

DevOps & Tools

- **JWT (JSON Web Token)**
- **Docker & Docker Compose**
- **Postman**
- **AutoMapper & FluentValidation**
- **IdentityServer4**
- **Ocelot API Gateway**
- **Git, GitHub**
- **Clean Code, SOLID Principles, Folder Structuring**
- **Microservice Structure**

Robotics & RPA Intern

KMN Robotics | *2024*

- **Robot Programming:** Supported the programming and testing of motion scenarios for industrial robotic arms.
- **Motion Design:** Developed robot movements based on timing and coordinate systems for production tasks.
- **Process Automation:** Designed and implemented software solutions to automate repetitive tasks.
- **Workflow Analysis:** Analyzed business processes to identify and implement automation opportunities using RPA tools.

Software Development (Database) Intern

Probel Software | *September 2025 – October 2025*

- **Database Design:** Designed and developed relational data structures and tables within **Oracle Database** for Health Information Systems (HBYS).
- **Logging & Monitoring:** Integrated custom logging mechanisms into **.NET Core** actions, ensuring all transaction logs were accurately persisted to the Oracle database for auditability.
- **Data Management:** Managed seamless database schema changes and versioning using **Migration** workflows.

Education

Near East University – Software Engineering (English) (September 2020 – June 2025) Bachelor’s DegreeSertifikalar
